

Tegile Systems Presents at ExecEvent's Next Gen Storage Summit

Newark, Calif. – February 26, 2014 – [Tegile Systems](#), the leading provider of flash-driven storage arrays for virtualized server and virtual desktop environments, today announced its Vice President of Marketing, Rob Commins, will present at the ExecEvent: Next Gen Storage Summit at the Four Points by Sheraton LAX in Los Angeles March 5.

The summit brings together industry experts to educate end users on the best way to use solid state disk/flash or object storage as part of their overall enterprise storage architecture. Tegile is among the select vendors invited to present to conference attendees about the benefits of implementing a new generation of flash-driven enterprise storage arrays that balance performance, capacity, features and price for virtualization, file services and database applications.

“We are excited to have the opportunity to meet with and educate end users at the Next Gen Storage Summit about how they can maximize the performance, minimize their capacity requirements and significantly reduce their acquisition and operational costs of storage,” said Commins. “I believe there is still a lot of questions, concerns and misunderstanding among end users about how to best leverage SSD and flash technologies as their data storage and application needs continue to evolve. I look forward to helping demystify the process through my participation at the ExecEvent summit.”

Tegile's [Zebi™](#) hybrid arrays are a technology and market favorite that satisfy the demand for performance at solid-state speeds, with the capacity and cost advantages of hard disk storage. Zebi arrays are significantly faster than legacy arrays, and significantly less expensive than all solid-state disk-based arrays. Featuring both NAS and SAN connectivity, they are easy to use, fully redundant, highly scalable, and come complete with built-in snapshot, replication, near-instant recovery, and virtualization management features.

The ExecEvent Next Gen Storage features a day of case study presentations, IT buyer/influencer panels and sponsor exhibitions. Selected end users will also participate in a panel discussion focused on trends, purchasing decisions, issues solved with SSD/flash or object storage products, predictions and more. For additional information or to register for the event, interested parties can visit <http://www.truthinit.com/Event/39-execept/2014/03/05/111-next-gen-storage-summit.html>

About Tegile Systems

Tegile Systems is pioneering a new generation of flash-driven enterprise storage arrays that balance performance, capacity, features and price for virtualization, file services and

database applications. With Tegile's Zebi line of hybrid storage arrays, the company is redefining the traditional approach to storage by providing a family of arrays that is significantly faster than all hard disk-based arrays and significantly less expensive than all solid-state disk-based arrays.

Tegile's patent-pending MASS technology accelerates the Zebi's performance and enables on-the-fly de-duplication and compression of data so each Zebi has a usable capacity far greater than its raw capacity. Tegile's award-winning technology solutions enable customers to better address the requirements of server virtualization, virtual desktop integration and database integration than other offerings. Featuring both NAS and SAN connectivity, Tegile arrays are easy-to-use, fully redundant, and highly scalable. They come complete with built-in auto-snapshot, auto-replication, near-instant recovery, onsite or offsite failover, and virtualization management features. Additional information is available at www.tegile.com. Follow Tegile on Twitter @tegile.
